Level: Confidential

Shenzhen Concox Information Technology Co., Ltd

GPS Tracker

Communication Protocol

(JM01、JV200、GT300、GT800、MT200、OB22、X3、Q2、Wetrack lite、
 ET25、GT08、HVT001、ET500、U20)

Writer	Date	Version	Audit	Approval	Description
BianYuta o	2015-12-9	1.0.0			First edition (Protocol format modification)
	2017-6-23	v.1.1			Revised
	2018-4-11	V.1.2			Wifi package Fall alarm
	2018-5-24	V1.6			Modify example
	2018-5-30	V1.7			Modify heartbeat packet voltage level
	2018-6-6	V1.8			Add Sub-protocol Number of 94 packet Add transfer protocol
	2018-7-19	V1.9			Add 8D data(apply to HVT001)
	2018-8-10	V2.0			Add 3E alarm byte(apply to GT300)
	2018-8-13	V2.1			Add 0x20 alarm byte(apply to Q2) Add fuel sensor data(apply to X3 and GT800)
	2018-8-31	V2.2			Add 19 lbs alarm packet

	2019-4-28	V2.4			Add the alarm bit 19 in the alarm packet
	2019-9-27	V2.5			Add ET500 and U20

III.	APPENDIX	41
1.	code fragment of the CRC-ITU lookup table algorithm implemented based on C language	41
2.	Data Flow Diagram.....	42

I. Protocol Packet Format

Format	Length (Byte)	Description
Start Bit	2	0x780x78 (packet length : 1bit) or 0x79x79 (packet length 2 bits)
Packet Length	1(2)	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	Transmission packet type (see the following diagram for details)
Information Content	N	The specific contents are determined by the protocol numbers corresponding to different applications.
Information Serial Number	2	The serial number of the first GPRS data (including status packet and data packet such as GPS, LBS) sent after booting is '1', and the serial number of data sent later at each time will be automatically added '1'.
Error Check	2	Serial Number (including "Packet Length" and "Information Serial Number"), are values of CRC-ITU. CRC error occurs when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value:0x0D0x0A

1.1 Protocol Number

Login Information	0x01
Positioning Data (UTC)	0x22
Heartbeat Packet	0x13
Online Command Response of Terminal	0x21 (0x15)
Alarm Data (UTC)	0x26
LBS Alarm	0x19
Alarm Data(UTC) apply to HVT001	0x27
Online Command	0x80
Time Check Packet	0x8A
WIFI Communication Protocol	0x2C
Information Transmission Packet	0x94
External device transfer Packet(apply X3)	0x9B
Server Response transfer data Packet	0x9B
External module transmission Packet	0x9C

II. Protocol Packet

1. Login packet

Description:

- Login packet is the information packet connecting the terminal and platform. It can send terminal information to platform.
- If a GPRS connection is established successfully, the terminal will send a first login message packet to the server and, within five seconds, if the terminal receives a data packet responded by the server, the connection is considered to be a normal connection; if not, the terminal will send login packet again.
- If no packet returned by server within 5 seconds, then the response of login packet is timeout.
- Terminal reboot automatically after 3 timeouts.

1.1 Login message packet

	Length	Description
Start Bit	2	0x78 0x78
Packet Length	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x01
Information Content	Terminal ID	8 Example: IMEI number is 123456789123456, terminal ID is: 0x01 0x23 0x45 0x67 0x89 0x120x34 0x56
	Model Identification Code	2 Distinguish model of terminal by identification code.
	Time Zone Language	2 See the following chart for details of time zone language mark.
Information Serial Number	2	The serial number of the first GPRS data (including status packet and data packet such as GPS, LBS) sent after booting is '1', and the serial number of data sent later at each time will be automatically added '1'.
Error Check	2	Error check (From "Packet Length" to "Information Serial Number"), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value:0x0D 0x0A

Example: 78 78 11 01 07 52 53 36 78 90 02 42 70 00 32 01 00 05 12 79 0D 0A

Time Zone Language

One and a half bits bit15—bit4	15		
	14		
	13		
	12		
	11		
	10		
	9		Time zone value expands 100 times
	8		
	7		
	6		
	5		
	4		
Lower half bit4-bit0	3	GMT	
	2		No definition
	1	Language Select Bit	Chinese
	0	Language Select Bit	English

Bit3 0-----Eastern time

1-----Western time

Example: Extended bit: 0x32 0x00 means GMT+8

Calculation method: $8*100=800$ converts to HEX: 0X0320

Extended bit: 0x4D 0xD8 means GMT-12:45

Calculation method: $12.45*100=1245$ converts to HEX: 0x04 0xDD

Here, to save 4 bytes, calculation result left shifted 4 bits and combined eastern time, western time and language bit.

1.2 Login packet response (server response)

1.	Length	Description
Start Bit	2	0x78 0x78
Packet Length	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x01
Information Serial Number	2	Serial number of data sent later each time will be automatically added '1'.
Error Check	2	Error check (From "Packet Length" to "Information Serial Number"), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value:0x0D 0x0A

Example: 78 78 05 01 00 05 9F F8 0D 0A

2. Heartbeat Packet

Description:

- a) Heartbeat packet is a data packet to maintain the connection between the terminal and the server.
- b) If a GPRS connection is established successfully, the terminal will send a first login message packet to the server and, within five seconds, if the terminal receives a data packet responded by the server, the connection is considered to be a normal connection; if not, the terminal will send login packet again.
- c) If no packet returned by server within 5 seconds, then the response of heartbeat packet is timeout.
- d) Terminal reboot automatically after 3 timeouts.

2.1. Heartbeat packet sent by terminal

Heartbeat Packet

	Length (Byte)	Description
Start Bit	2	0x78 0x78
Packet Length	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x13
Information Content	Terminal Information Content	1 See the following diagram for details
	Built-in battery voltage Level	1 0x00: No Power (shutdown) 0x01: Extremely Low Battery 0x02: Very Low Battery (Low Battery Alarm) 0x03: Low Battery (can be used normally) 0x04: Medium 0x05: High 0x06: Full
	GSM Signal Strength	1 0x00: no signal; 0x01: extremely weak signal; 0x02: weak signal; 0x03: good signal; 0x04: strong signal.
	Language/Extended Port Status	2 latter bit 0x01 Chinese 0x02 English
Serial Number	2	Serial number of data sent later each time will be automatically added '1'.
Error Check	2	Error check (From "Packet Length" to "Information Serial Number"), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value: 0x0D 0x0A

Example: 78 78 0A 13 40 04 04 00 01 00 0F DC EE 0D 0A

Terminal Information

One byte is consumed defining for various status information of the mobile phone.

Bit		Code Meaning
BYTE	Bit7	1: Oil and electricity disconnected
		0: Oil and electricity connected
	Bit6	1: GPS tracking is on
		0: GPS tracking is off
	Bit3~Bit5	Extended Bit
	Bit2	1: Charge On
		0: Charge Off
	Bit1	1: ACC high
		0: ACC Low
	Bit0	1: Defense Activated
		0: Defense Deactivated

2.2 Server responds the heartbeat packet

	Length (Byte)	Description
Start Bit	2	0x780x78
Packet Length	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x13
Serial Number	2	Serial number of data sent later at each time will be automatically added '1'.
Error Check	2	Error check (From "Packet Length" to "Information Serial Number") , are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value: 0xD0x0A

Example : 78 78 05 13 01 00 E1 A0 0D 0A

3. GPS location packet

Description:

- a) Data packet used to transmit terminal location
- b) Upload locating data based on rule after successfully connected and positioned.
- c) Re-upload locating data after successfully connected.

3.1 Location packet sent by terminal

		Length	Description
Start Bit		2	0x78 0x78
Packet Length		1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number		1	0x22 (UTC)
Information Content	Date Time	6	Year (1byte) Month (1byte) Day (1byte) Hour (1byte) Min (1byte) Second (1byte) (converted to decimal) (Date Time)
	Quantity of GPS satellites	1	The first character is GPS information length. The second character is positioning satellite number (converted to a decimal)
	Latitude	4	Convert to a decimal and divide 1800000
	Longitude	4	Convert to a decimal and divide 1800000
	Speed	1	Convert to a decimal
	Course, Status	2	Convert to binary number of 16 bits and calculate by bits (see the following diagram)
	MCC	2	Mobile Country Code(MCC) (converted to a decimal)
	MNC	1	Mobile Network Code(MNC)(converted to a decimal)
	LAC	2	Location Area Code (LAC) (converted to a decimal)
	Cell ID	3	Cell Tower ID(Cell ID)(converted to a decimal)
GPS Real-Time Re-upload	ACC	1	ACC Status ACC low: 00, ACC high: 01 (not available for 06)
	Data Upload Mode	1	GPS data upload mode (06 series are excluded) 0x00 Upload by time interval 0x01 Upload by distance interval 0x02 Inflection point upload 0x03 ACC status upload 0x04 Re-upload the last GPS point when back to static. 0x05 Upload the last effective point when network recovers. 0x06 Update ephemeris and upload GPS data compulsorily 0x07 Upload location when side key triggered 0x08 Upload location after power on 0x09 Unused 0x0A Upload the last longitude and latitude when device is static; time updated 0x0D Upload the last longitude and latitude when device is static 0x0E Gpsdup upload (Upload regularly in a static state.)
	GPS Real-Time Re-upload	1	0x00 Real time upload 0x01 Re-upload(06 series are excluded)

	Mileage	4	turn HEX into decimal. (Only available for devices with this function)
Serial Number		2	Serial number of data sent later at each time will be automatically added '1'.
Error Check		2	Error check (From "Packet Length" to "Information Serial Number"), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit		2	Fixed value:0x0D 0x0A

Example: 78 78 22 22 0F 0C 1D 02 33 05 C9 02 7A C8 18 0C 46 58 60 00 14 00 01 CC 00 28 7D 00 1F 71 00 00 01 00 08 20 86 0D 0A

i. Course & Status

Two bytes are consumed, defining the running direction of GPS. The value ranges from 0° to 360° measured clockwise from north of 0° .

BYTE_1	Bit7	0
	Bit6	0
	Bit5	GPS real-time/differential positioning
	Bit4	GPS having been positioning or not
	Bit3	East Longitude, West Longitude
	Bit2	South Latitude, North Latitude
	Bit1	
	Bit0	
BYTE_2	Bit7	Course
	Bit6	
	Bit5	
	Bit4	
	Bit3	
	Bit2	
	Bit1	
	Bit0	

For example: the value is 0x15 0x4C, the corresponding binary is 00010101 01001100,

- BYTE_1 Bit7 0
- BYTE_1 Bit6 0
- BYTE_1 Bit5 0 (real time GPS)
- BYTE_1 Bit4 1 (GPS has been positioned)
- BYTE_1 Bit3 0 (East Longitude)
- BYTE_1 Bit2 1 (North Latitude)

BYTE_1 Bit1	0
BYTE_1 Bit0	1
BYTE_2 Bit7	0
BYTE_2 Bit6	1
BYTE_2 Bit5	0
BYTE_2 Bit4	0
BYTE_2 Bit3	1
BYTE_2 Bit2	1
BYTE_2 Bit1	0
BYTE_2 Bit0	0

Course 332 °(0101001100 in Binary, or 332 in decimal)

which means GPS tracking is on, real time GPS, location at north latitude, east longitude and the course is 332 °.

3.2 Server location packet response

Location packet server no response

4 LBS Multiple Bases Extension Packet

Description: For transmission of data packet when device is not located

4.1 Terminal sent LBS multiple bases extension packet

	Length	Description
Start Bit	2	0x78 0x78
Packet Length	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x28
Information Content	6	Year (1byte) Month (1byte) Day (1byte) Hour (1byte) Min (1byte) Second (1byte) (converted to a decimal) (Date Time)
MCC	2	Mobile Country Code(MCC) (converted to a decimal)
MNC	1	Mobile Network Code(MNC)(converted to a decimal)
LAC	2	Location Area Code (LAC) (converted to a decimal)
CI	3	Cell Tower ID(Cell ID)(converted to a decimal)
RSSI	1	Signal level of community, range 0x00~0xFF, 0x00 Weakest signal 0xFF Strongest signal
NLAC1	2	Same as LAC
NCI1	3	Same as CI
NRSSI1	1	Same as RSSI
NLAC2	2	Same as LAC
NCI2	3	Same as CI
NRSSI2	1	Same as RSSI
NLAC3	2	Same as LAC
NCI3	3	Same as CI
NRSSI3	1	Same as RSSI
NLAC4	2	Same as LAC
NCI4	3	Same as CI
NRSSI4	1	Same as RSSI
NLAC5	2	Same as LAC
NCI5	3	Same as CI
NRSSI5	1	Same as RSSI
NLAC6	2	Same as LAC
NCI6	3	Same as CI
NRSSI6	1	Same as RSSI
Timing Advance	1	Value= “Actual time of signal from Mobile Station to Location base”- “Time of signal from Mobile Station to Location base supposed the distance is 0”
LANGUAGE	2	0x00 0x01Chinese 0x00 0x02English
Serial Number	2	Serial number of data sent later at each time will be automatically added ‘1’.

Error Check	2	Error check (From “Packet Length” to“Information Serial Number”), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value:0x0D 0x0A

Example: 78 78 3B 28 10 01 0D 02 02 02 01 CC 00 28 7D 00 1F 71 3E 28 7D 00 1F 72 31 28 7D 00 1E 23 2D 28 7D 00 1F 40 18 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 FF 00 02 00 05 B1 4B 0D 0A

4.2 Server reply: No need to reply.

5 WIFI Information Protocol (Q2\HVT001)

WIFI information packet

Description: It is used for transmitting the WIFI data packet received by terminal.

5.1 WiFi packet sent by terminal

		Length (Byte)	Explain
Start Bit		2	0x78 0x78
Packet Length		1	Length= protocol number +information content+ serial number +error check
Protocol Number		1	0x2C
Info Content	Date and Time (UTC)	6	year (1byte) month (1byte) day (1byte) hour (1byte) minute (1byte) second (1byte) (convert to decimal)
	MCC	2	Mobile Country Code
	MNC	1	Mobile Network Code(MNC)
	LAC	2	Mobile Network Code(MNC)
	CI	3	Cell Tower ID(Cell ID)
	RSSI	1	Received Signal Strength Indicator , range from 0x00~0xFF, 0x00weak, 0xFF strongest.
	NLAC1	2	Same as LAC
	NCI1	3	Same as CI
	NRSSI1	1	Same as RSSI
	NLAC2	2	Same as LAC

	NCI2	3	Same as CI
	NRSSI2	1	Same as RSSI
	NLAC3	2	Same as LAC
	NCI3	3	Same as CI
	NRSSI3	1	Same as RSSI
	NLAC4	2	Same as LAC
	NCI4	3	Same as CI
	NRSSI4	1	Same as RSSI
	NLAC5	2	Same as LAC
	NCI5	3	Same as CI
	NRSSI5	1	Same as RSSI
	NLAC6	2	Same as LAC
	NCI6	3	Same as CI
	NRSSI6	1	Same as RSSI
	Time leads	1	Time difference between actual time of mobile station signal reaches to base station and time of mobile station signal reaches to base station when distance assumed 0
	WiFi quantity	1	Confirm WIFI quantity in the packet, 0: no WIFI detected
	WIFI MAC1	6	WIFI MAC of searched signal 1(transmit according to the actual number of searched WIFI. Search one, transmit one...; search none, then transmit 0)
	WIFI strength 1	1	WIFI strength of signal 1
	WIFI SSID Length 1	1	ISSID Length of SSID 1WIF
	WIFI SSID1	N	SSID content of SSID 1WIFI (0-32 Bytes)
	WIFI MAC2	6	Same as above
	WIFI strength 2	1	Same as above
	WIFI SSID Length 2	1	ISSID Length of SSID 1WIF
	WIFI SSID2	N	SSID content of SSID 1WIFI (0-32 Bytes)

Information Serial Number		2	The serial number of the first GPRS data (including status packet and data packet such as GPS, LBS package) sent after booting is '1', and the serial number of data sent later at each time will be automatically added '1'.
Error Check		2	The check codes of data in the structure of the protocol, from the Packet Length to the Information Serial Number

		(including “Packet Length” and “Information Serial Number”), are values of CRC-ITU.
		CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet.
Stop Bit	2	Fixed value: 0x0D 0x0A

X

ample: 78 78 48 2C 10 06 0E 02 2D 35 01 CC 00 28 7D 00 1F 71 2D 28 7D 00 1E 17 25 28 7D 00 1E 23 1E 28 7D 00 1F 72 1C 28 7D 00 1F 40 12 00 00 00 00 00 00 00 00 00 FF 02 80 89 17 44 98 B4 5C CC 7B 35 36 61 A6 5B 00 1FA0 04 0D 0A

5.2 WIFI packet responded by sever

WIFI packet server has no need to respond

6 Alarm Packet

Description:

- a) Transmit alarm content defined by terminal
- b) Server response and parse longitude and latitude into address and re-upload to terminal after receiving the alarm content
- c) Terminal send address to pre-set SOS number of device.

6.1 Alarm packet sent by terminal

Alarm packet (one fence)

	Length	Description
Start Bit	2	0x78 0x78
Packet Length	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x26 (UTC)
Information Content	Date Time	6 Year (1byte) Month (1byte) Day (1byte) Hour (1byte) Min (1byte) Second (1byte) (converted to a decimal) (Date Time)
	Quantity of GPS information satellites	1 The first character is GPS information length, The second character is positioning satellite number (converted to a decimal)
	Latitude	4 Convert to a decimal and divide 1800000
	Longitude	4 Convert to a decimal and divide 1800000
	Speed	1 Convert to a decimal
	Course, Status	2 Convert to binary number of 16 bits and calculate by bits (see the following diagram) (same as GPS packet, see GPS packet for details)
	LBS length	1 LBS length in total (LBS length +MCC +MNC +Cell ID)
	MCC	2 Mobile Country Code(MCC) (converted to a decimal)
	MNC	1 Mobile Network Code(MNC)(converted to a decimal)
	LAC	2 Location Area Code (LAC) (converted to a decimal)
	Cell ID	3 Cell Tower ID(Cell ID)(converted to a decimal)
	Terminal Information	1 See the following diagram
Build-in battery Voltage Level	1	0x00: No Power (shutdown) 0x01: Extremely Low Battery (not enough for calling or sending text messages, etc.) 0x02: Very Low Battery (Low Battery Alarm) 0x03: Low Battery (can be used normally) 0x04: Medium 0x05: High 0x06: Full
		GSM Signal Strength
	1	0x00: no signal; 0x01: extremely weak signal;

			0x02: weak signal; 0x03: good signal; 0x04: strong signal.
	Alarm/Language	2	See the following diagram
	Serial Number	2	Serial number of data sent later at each time will be automatically added '1'.
	Error Check	2	Error check (From "Packet Length" to "Information Serial Number") , are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
	Stop Bit	2	Fixed value:0x0D 0x0A

Example: 78 78 25 26 12 03 0C 06 38 16 C3 02 6C 10 54 0C 38 C9 70 01 44 03 09 01 CC 00 28 66 00 0E EE
0C 06 04 03 02 00 0D A2 DB 0D 0A

Alarm packet (multiple fences)

		Length	Description
	Start Bit	2	0x78 0x78
	Packet Length	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
	Protocol Number	1	0x27 (UTC)
Information Content	Date Time	6	Year (1byte) Month (1byte) Day (1byte) Hour (1byte) Min (1byte) Second (1byte) (converted to a decimal) (Date Time)
	Quantity of GPS information satellites	1	The first character is GPS information length, The second character is positioning satellite number (converted to a decimal)
	Latitude	4	Convert to a decimal and divide 1800000
	Longitude	4	Convert to a decimal and divide 1800000
	Speed	1	Convert to a decimal
	Course, Status	2	Convert to binary number of 16 bits and calculate by bits (see the following diagram) (same as GPS packet, see GPS packet for details)
	LBS length	1	LBS length in total (LBS length+ MCC+ MNC+ Cell ID)
	MCC	2	Mobile Country Code(MCC) (converted to a decimal)
	MNC	1	Mobile Network Code(MNC)(converted to a decimal)
	LAC	2	Location Area Code (LAC) (converted to a decimal)
	Cell ID	3	Cell Tower ID(Cell ID)(converted to a decimal)
	Terminal Information	1	See the following diagram
	Voltage Level	1	0x00: No Power (shutdown) 0x01: Extremely Low Battery (not enough for calling or sending text messages, etc.) 0x02: Very Low Battery (Low Battery Alarm) 0x03: Low Battery (can be used normally)

			0x04: Medium 0x05: High 0x06: Full
	GSM Signal Strength	1	0x00: no signal; 0x01: extremely weak signal; 0x02: weak signal; 0x03: good signal; 0x04: strong signal.
	Alarm/Language	2	See the following diagram
	Fence No.	1	Valid for geo-fence alarm, 1 means No.1, 2 means No.2....FF means invalid
	Serial Number	2	Serial number of data sent later at each time will be automatically added '1'.
	Error Check	2	Error check (From "Packet Length" to "Information Serial Number"), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
	Stop Bit	2	Fixed value:0x0D 0x0A

Example: 78 78 25 26 11 0C 0D 13 37 36 CB 02 6C 15 A6 0C 38 CF 0A 00 54 B9 08 01 CC 00 28 66 00 0E
EE D8 02 04 00 02 00 1D 76 F9 0D 0A

6.2 Alarm packet response of server

	Length	Description
Start Bit	2	0x78 0x78
Packet Length	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x26 (UTC)
Information Serial Number	2	Serial number of data sent later at each time will be automatically added '1'.
Error Check	2	Error check (From "Packet Length" to "Information Serial Number") , are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value:0x0D 0x0A

Example: 78 78 05 26 00 1C 9D 86 0D 0A

7 Alarm Packet (LBS)

Description:

- Transmit alarm content defined by terminal
- Server response and parse longitude and latitude into address and re-upload to terminal after receiving the alarm content
- Terminal send address to pre-set SOS number of device.

7.1 Alarm packet sent by terminal

ii.	Length	Description
Start Bit	2	0x78 0x78
Packet Length	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x19 (UTC)
MCC	2	Mobile Country Code(MCC) (converted to a decimal)
MNC	1	Mobile Network Code(MNC)(converted to a decimal)
LAC	2	Location Area Code (LAC) (converted to a decimal)
Cell ID	3	Cell Tower ID(Cell ID)(converted to a decimal)
Terminal Information	1	See the following diagram
Voltage Level	1	0x00: No Power (shutdown) 0x01: Extremely Low Battery (not enough for calling or sending text messages, etc.) 0x02: Very Low Battery (Low Battery Alarm) 0x03: Low Battery (can be used normally) 0x04: Medium 0x05: High 0x06: Very High
GSM Signal Strength	1	0x00: no signal; 0x01: extremely weak signal; 0x02: very weak signal; 0x03: good signal; 0x04: strong signal.
Alarm/Language	2	See the following diagram
Serial Number	2	Serial number of data sent later at each time will be automatically added '1'.
Error Check	2	Error check (From "Packet Length" to "Information Serial Number") , are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value:0x0D 0x0A

Example: 78 78 12 19 01 CC 00 28 7D 00 1F 71 20 04 04 01 01 00 94 6C 89 0D 0A

ii. Terminal Information

Bit		Code Meaning
BYTE	Bit7	1:Oil and electricity disconnected
		0: Oil and electricity connected

Concox

8 Online command

Description:

- Use server online command to control terminal to execute task.
- Terminal response results to server.

8.1 Online command sent by server

		Length	Description
Start Bit		2	0x78 0x78
Length of data bit		1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number		1	0x80
Information Content	Length of Command	1	=Server flag bit + command content length
	Server Flag Bit	4	Leave for server identification. Terminal receives the original data in Binary in response packet
	Command Content	M	Character string replied in ASCII coding. Command content is compatible with SMS command.
	(Language)	2	Latter bit : 0x01 Chinese , 0x02 English (this bit is not mandatory)
Information Serial Number		2	Serial number of data sent later at each time will be automatically added '1'.
Check Bit		2	Error check (From "Packet Length" to "Information Serial Number") , are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit		2	Fixed value:0x0D 0x0A

Example :

The bellowing two both works :

Without language bit : 78 78 0E 80 08 00 00 00 00 73 6F 73 23 00 01 6D 6A 0D 0A

With language bit: 78 78 10 80 08 00 00 00 00 73 6F 73 23 00 02 00 01 9A 17 0D 0A

8.2 Online command replied by terminal

8.2.1 Terminal reply (general command: JV200/GT300/GT800/MT200))

		Length	Description
Start Bit		2	0x79 0x79
Length of data bit		2	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number		1	0x21
Information Content	Server Flag Bit	4	Leave for server identification. Terminal receives the original data in Binary in response packet
	Content Code	1	0x01 ASCII code 0x02 UTF16-BE code.
	Content	M	Data needed to be sent (according to content code format)
Information Serial Number		2	Serial number of data sent later at each time will be automatically added '1'.

Check Bit	2	Error check (From “Packet Length” to“Information Serial Number”), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value:0x0D 0x0A

Example: 79 79 00 9D **21** 00 00 00 00 01 42 61 74 74 65 72 79 3A 34 2E 31 36 56 2C 4E 4F 52 4D 41 4C 3B 20 47 50 52 53 3A 4C 69 6E 6B 20 55 70 3B 20 47 53 4D 20 53 69 67 6E 61 6C 20 4C 65 76 65 6C 3A 53 74 72 6F 6E 67 3B 20 47 50 53 3A 53 65 61 72 63 68 69 6E 67 20 73 61 74 65 6C 6C 69 74 65 2C 20 53 56 53 20 55 73 65 64 20 69 6E 20 66 69 78 3A 30 28 30 29 2C 20 47 50 53 20 53 69 67 6E 61 6C 20 4C 65 76 65 6C 3A 3B 20 41 43 43 3A 4F 46 46 3B 20 44 65 66 65 6E 73 65 3A 4F 46 46 00 2E 26 DF 0D 0A

8.2.2 Terminal reply (APPLY to JM01)

	Length	Description
Start Bit	2	0x78 0x78
Length of data bit	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x15
Information Content	Length of Command	1 =Server flag bit + command content length
	Server Flag Bit	4 Leave for server identification. Terminal receives the original data in Binary in response packet
	Command Content	M Character string replied in ASCII coding.
	Language	2 Chinese:0x00 0x01 English:0x00 0x02
Information Serial Number	2	Serial number of data sent later at each time will be automatically added ‘1’.
Error Check	2	Error check (From “Packet Length” to“Information Serial Number”), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value:0x0D 0x0A

Example: 78 78 28 **15** 20 **00 00 00 00** 53 4F 53 31 3A 31 33 34 32 31 36 33 32 36 39 39 20 53 4F 53 32 3A 20 53 4F 53 33 3A **00 01** 00 2A C3 9C 0D 0A

9 Time calibration Packet

Description:

Used for checking time request sent by terminal to server

Generally, it is not mandatory to response as the device can calibrate the time by GPS :

Server can response with a UTC time if needed

9.1 Time request sent by terminal

	Length (Byte)	Description
Start Bit	2	0x78 0x78
Packet Length	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x8A
Serial Number	2	Serial number of data sent later at each time will be automatically added '1'.
Error Check	2	Error check (From "Packet Length" to "Information Serial Number"), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value: 0x0D0x0A

Example: 78 78 05 8A 00 06 88 29 0D 0A

9.2 Server response time information

	Length	Description
Start Bit	2	0x78 0x78
Packet Length	1	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x8A (UTC)
Information Content	6	Year (1byte) Month (1byte) Day (1byte) Hour (1byte) Min (1byte) Second (1byte) (converted to a decimal)
Date Time		
Serial Number	2	Serial number of data sent later at each time will be automatically added '1'.
Error Check	2	Error check (From "Packet Length" to "Information Serial Number"), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value: 0x0D0x0A

Example: 78 78 0B 8A 0F 0C 1D 00 00 15 00 06 F0 86 0D 0A

10 Information transmission packet

Description:

Terminal transmits all types of non-position data.

10.1 Information transmission packet sent by terminal

	Length	Description
Start Bit	2	0x79 0x79
Length of data bit	2	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number	1	0x94
Information Content	1	00 External power voltage 01~03 (custom) 04 terminal status synchronization 05 door status 06 voltage mileage 08 self-detection parameters 0A iccid 0D fuel sensor datato add
		Data Content N Different information type results in different transmission content. See the following for details.
Information Serial Number	2	Serial number of data sent later at each time will be automatically added '1'.
Check Bit	2	Error check (From "Packet Length" to "Information Serial Number"), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit	2	Fixed value:0x0D0x0A

Example: 79 79 00 7F 94 04 41 4C 4D 31 3D 43 34 3B 41 4C 4D 32 3D 43 43 3B 41 4C 4D 33 3D 34 43 3B 53 54 41 31 3D 43 30 3B 44 59 44 3D 30 31 3B 53 4F 53 3D 2C 2C 3B 43 45 4E 54 45 52 3D 3B 46 45 4E 43 45 3D 46 65 6E 63 65 2C 4F 4E 2C 30 2C 32 33 2E 31 31 31 38 30 39 2C 31 31 34 2E 34 30 39 32 36 34 2C 34 30 30 2C 49 4E 20 6F 72 20 4F 55 54 2C 30 3B 4D 49 46 49 3D 4D 49 46 49 2C 4F 46 46 00 0A 06 1E 0D 0A

Transmitted information content

When type is 00, the bit transmit external battery. This bit is two-digit hexadecimal value. Hexadecimal value converted to decimal value and divide 100

Example: 0X04,0X9F, 049F converted to decimal is 101183, then divide 100 is 11.83, which means external voltage is 11.83V

When type is 04, the bit transmits information of terminal status synchronization. The bit length extended. Transmission is ASCII code.

Definition of content identifier

Definition	Identifier
Alarm Bit1	ALM1
Alarm Bit 2	ALM2
Alarm Bit 3	ALM3
Status Bit 1	STA1
SOS Number	SOS
Centre Number	CENTER
Fence	FENCE
Fuel/Electricity Cutoff Status	DYD
Mode	MODE

◇ **ALM1 Definition (Status)**

Bit	Definition	Mark
bit7	Vibration Alarm	1 ON 0 OFF
bit6	Network Alarm	1 ON 0 OFF
bit5	Phone Alarm	1 ON 0 OFF
bit4	SMS Alarm	1 ON 0 OFF
bit3	Displacement Alarm	1 ON 0 OFF
bit2	Network Alarm	1 ON 0 OFF
bit1	Phone Alarm	1 ON 0 OFF
bit0	SMS Alarm	1 ON 0 OFF

◇ **ALM2 Definition (Status)**

Bit	Definition	Mark
bit7	Low Internal Battery Alarm	1 ON 0 OFF
bit6	Network Alarm	1 ON 0 OFF
bit5	Phone Alarm	1 ON 0 OFF
bit4	SMS Alarm	1 ON 0 OFF
bit3	Low External Battery Alarm	1 ON 0 OFF
bit2	Network Alarm	1 ON 0 OFF
bit1	Phone Alarm	1 ON 0 OFF
bit0	SMS Alarm	1 ON 0 OFF

◇ **ALM3 Definition (Status)**

Bit	Definition	Mark
bit7	Overspeed Alarm	1 ON 0 OFF
bit6	Network Alarm	1 ON 0 OFF
bit5	Phone Alarm	1 ON 0 OFF
bit4	SMSAlarm	1 ON 0 OFF
bit3	Power Off Alarm	1 ON 0 OFF
bit2	Network Alarm	1 ON 0 OFF
bit1	Phone Alarm	1 ON 0 OFF
bit0	SMS Alarm	1 ON 0 OFF

◇ **STA1 Definition (Status)**

Bit	Definition	Mark

bit7	Arm Status	1 Arm 0 Disarm
bit6	Automatically Arm	1 ON 0 OFF
bit5	Manually Arm	1 ON 0 OFF
bit4	Remotely Disarm	1 ON 0 OFF
bit3	To Be Defined	
bit2	To Be Defined	
bit1	Disassembly OFF	1 ON 0 OFF
bit0	Disassembly Alarm Status	1 ON 0 OFF

✧ Fuel/Electricity Status Definition

Bit	Definition	Mark
bit7	Undefined	
bit6	Undefined	
bit5	Undefined	
bit4	Undefined	
bit3	Deferred execution caused by overspeed	1Valid bit 0 Invalid bit
bit2	Deferred execution caused by GPS unlocated	1Valid bit 0 Invalid bit
bit1	Oil/Electricity cutoff	1Valid bit 0 Invalid bit
bit0	Oil/Electricity connection	1Valid bit 0 Invalid bit

- ✧ SOS definition: adopt ASCII to transmit (use “,” to separate if multiple SOS numbers)
- ✧ Center number definition: adopt ASCII to transmit
- ✧ Fence definition: adopt ASCII to transmit
- ✧ Mode: adopt ASCII to transmit(separate parameters by “, ”)

Example : ALM1=FF;ALM2=FF;ALM3=FF;STA1=CO ; DYD=01 ; SOS=12345 , 2345 , 5678 ; CENTER=987654;FENCE=FENCE,ON,0,-22.277120,-113.516763,5,IN,1; MODE=MODE,1,20,500

Notice: Not all contents are transmitted and please parse based on bits. Different products upload different contents.

When type is 05, this bit transmit external IO detection(door checking). Transmission is hexadecimal.

Bit	Definition	Mark
bit7	To Be Defined	
bit6	To Be Defined	
bit5	To Be Defined	
bit4	To Be Defined	
bit3	To Be Defined	
bit2	IO Status	1 High 0 Low
bit1	Triggering Status	1High triggering 0 Low triggering
bit0	Door Status	1ON 0 OFF

When type is 08, the bit will transmit terminal Self-checking parameters information. The position length is extended and ASCII code transmitted

When the type is 0A, this bit transmits ICCID, which is hexadecimal

IMEI	8	eg: If IMEI is 123456789123456, the terminal ID is: 0x01 0x23 0x45 0x67 0x89 0x12 0x34 0x56
IMSI	8	eg: If IMSI is 123456789123456, the terminal ID is: 0x01 0x23 0x45 0x67 0x89 0x12 0x34 0x56
ICCID	10	eg: If ICCID is 12345123456789123456, the terminal ID is: 0x12 0x34 0x51 0x23 0x45 0x67 0x89 0x12 0x34 0x56

When the type is 0D, this bit transmits fuel data

fuel sensor sample:

79 79 00 3F 94 0D 11 09 07 08 0C 03 21 41 49 4F 49 4C 2C 30 32 2C 30 32 35 2E 39 30 30 2C 30 32 35 2E 34 30 30 2C 35 31 39 4A 2C 30 32 30 2C 30 32 37 2E 31 34 30 2C 30 30 2C 39 46 83 A7 0D 12 0D 0A

Packet Type: General Packet data transmission (94)

CRC: CRC is correct, 0D12

Package length = 63 (003F)

Transmission type: fuel sensor (0D), transmission information: time and sensor information (11 09 07 08 0C 03 21 41 49 4F 49 4C 2C 30 32 2C 30 32 35 2E 39 30 30 2C 30 32 35 2E 34 30 30 2C 35 31 39 4A 2C 30 32 30 30 2C 30 32 37 2E 31 34 30 2C 30 30 2C 39 46)

Time: 11 09 07 08 0C 03 21 (note:GT800 has no time)

Serial number: 83A7

Sensor information:

21 41 49 4F 49 4C 2C 30 32 2C 30 32 35 2E 39 30 30 2C 30 32 35 2E 34 30 30 2C 35 31 39 4A 2C 30 3 2 30 30 2C 30 32 37 2E 31 34 30 2C 30 30 2C 39 46

Transfer ASCII:

!AIOIL,02,025.900,025.400,519J,0200,027.140,0,00,9F

ASCII	Description
!AIOIL	Head of Protocol
02	Device address

025. 900	Liquid level output value (Unit: cm)
025. 400	Temperature
4	protocol version number
12	Software version number
z	Hardware version number
02	Echo signal number (signal level)
0	Software status code
0	Hardware status code
027. 140	Liquid level measurement value (Unit: cm)
0	Motion status code, 0: move. 1: static
00	Multiples of excitation waveform
9F	Check code(Sum Check Bit) (capital letter)

10.2 Server Response Information Transmission Packet

Server no Response

11 External device transfer protocol (apply X3)

11.1 Device send transparent data to server

	Length	Description
Start Bit	2	0x79 0x79
Length of data bit	2	Length = Protocol Number + Information Content + Information Serial Number + Error Check

Protocol Number		1	0x9B
Information Content	Module type code	1	03
	Transparent content	N	
Information Serial Number		2	Serial number of data sent later at each time will be automatically added '1'.
Check Bit		2	Error check (From "Packet Length" to "Information Serial Number") , are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit		2	Fixed value:0xD0xA

Example:

79 79 00 14 9B 03 02 31 42 30 30 31 33 46 37 37 37 38 38 03 00 0B E8 E9 0D 0A

11.2 Server Response transfer data Packet

Server no Response

12 External module transmission protocol (Server send)

For transmission of external module data

12.1. Server send transparent data to module

		Length	Description
Start Bit		2	0x79 0x79
Length of data bit		2	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number		1	0x9B
Information Content	Module type code	1	
	Transparent content	N	
Information Serial Number		2	Serial number of data sent later at each time will be automatically added '1'.
Check Bit		2	Error check (From "Packet Length" to "Information Serial Number") , are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)

Stop Bit	2	Fixed value:0x0D 0x0A
----------	---	-----------------------

Module type code	Description
0x03	Serial transmission
0x05	IO Expansion Box IOE-1
0x07	Inertial Navigation UBI Protocol
0x09	Terminal log escalation

12.2. Server Response transfer data Packet

		Length	Description
Start Bit		2	0x79 0x79
Length of data bit		2	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number		1	0x9B
Information Content	Module type code	1	Reply is the same as sending
	Transparent content	N	
Information Serial Number		2	Serial number of data sent later at each time will be automatically added '1'.
Check Bit		2	Error check (From "Packet Length" to "Information Serial Number"), are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit		2	Fixed value:0x0D 0x0A

13 External module transmission protocol (Module send) (Apply U20)

For transmission of external module data

13.1. Device send transparent data to server

		Length	Description
Start Bit		2	0x79 0x79
Length of data bit		2	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number		1	0x9C

Information Content	Module type code	1	03
	Transparent content	N	
Information Serial Number		2	Serial number of data sent later at each time will be automatically added '1'.
Check Bit		2	Error check (From "Packet Length" to "Information Serial Number") , are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit		2	Fixed value:0x0D 0x0A

Module type code	Description
0x03	Serial transmission
0x05	IO Expansion Box IOE-1
0x07	Inertial Navigation UBI Protocol
0x09	Terminal log escalation

13.2. Server Response transfer data Packet

		Length	Description
Start Bit		2	0x79 0x79
Length of data bit		2	Length = Protocol Number + Information Content + Information Serial Number + Error Check
Protocol Number		1	0x9C
Information Content	Module type code	1	Reply is the same as sending
	Transparent content	N	
Information Serial Number		2	Serial number of data sent later at each time will be automatically added '1'.
Check Bit		2	Error check (From "Packet Length" to "Information Serial Number") , are values of CRC-ITU. CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet. (See Appendix 1)
Stop Bit		2	Fixed value:0x0D 0x0A

Inertial Navigation 07 Content:

Info Content	Module type coding	1	0x07 inertial navigation protocol
	Pass-throug h data	14+22*N (1-30seconds)	UTC time stamp (4byte) Latitude (4 bytes) (Convert to decimal and divided by 1800000) Longitude (4 bytes) (Convert to decimal and divided by 1800000) GPS status (1 byte), see below for details UBI event end flag (1 byte) (1 indicates the end of the event , 0 indicates the event start packet and the mid-packet) (the following 20 bytes) SN, serial number of each packet, (1byte), range 1-30, judging whether it is continuous by serial number UBI_On alarm type (1byte) (see Table 13.4) UBI_kind event type (1 byte): 0 none 1 UBI event 2UBI alarm UBI_A setting value of alarm parameter (1byte) (see Table 13.1 and Table 13.5) UBI_B setting value alarm parameter (1byte) (see Table 13.1 and Table 13.5) UBI event data (17byte), (see Table 13.2 for data types)

Terminal log report 09 Content:

Info Content	Module type coding	1	0x09 Terminal log report
	Pass-th rough data	2	Content length
		n	Content to upload

GPS status		
BYTE_1	Bit7	0
	Bit6	0
	Bit5	GPS real-time/differential positioning
	Bit4	GPS positioning or not
	Bit3	East longitude, west longitude
	Bit2	South latitude, north latitude
	Bit1	Reserved 0
	Bit0	Reserved 0

Remarks:

N represents second, and the largest N is 30;

GSM upload cloud platform condition 1: UBI_Kind is 1 or 2;

GSM upload cloud platform condition 2: UBI_ON is 1 to 8.

Table 13.1 Physical significance of UBI_A & UBI_B

(see table 13.5 for physical significance details)

	UBI_ON	UBI_A	UBI_B
1	Harsh acceleration	BS_Acce_Deta	BS_Acce_Time
2	Harsh brake	BS_Dece_Deta	/
3	Harsh lane switching	BS_Lane_Deta	BS_Lane_Angle
4	Sharp turn	BS_Turn_Deta	BS_Turn_Angle
5	Collision	BS_Coll_Deta	BS_Coll_Angle
6	Vehicle stability	BS_Stab_Rate	BS_Stab_Time
7	Rollover	BS_Roll_Angle	/
8	Abnormal attitude	SAtt_Min_Deta	SAtt_Max_Deta

Table 13.2 UBI Event data

No.	Variable name	Physical significance	Date type	Value range	Unit
1	Acc_X_Data	accelerated speed of y-axis	16 bit signed integer	-400 to 400	Unit:0.1m/s ²
2	Acc_Y_Data	accelerated speed of x-axis	16 bit signed integer	-400 to 400	Unit:0.1m/s ²
4	Pitch_Angle	Vehicle pitch angle	16 bit signed integer	-180 to 180	Unit:Degree
5	Roll_Angle	Vehicle roll angle	16 bit signed integer	-180 to 180	Unit:Degree
6	Yaw_Angle[4]	Vehicle orientation change angle	16 bit signed integer	-180 to 180	Unit:Degree
7	Car_Speed[4]	Vehicle speed	16 bit signed integer	0 to 100	Unit:m/s
8	INS_Flag	INS activated flag	8 bit unsigned integer	0 to 4	Unit: /
9	UBI_Num	Serial number	16 bit unsigned integer	0 to 65536	Unit: /

Table 13.3 INS_Flag Physical significance

Value	Description	Enable/Disable UBI
Ins_Flag=0	to be initialized	Disable UBI
Ins_Flag=1	INS activation step 1	Enable UBI
Ins_Flag=2	INS activation step 2	Enable UBI
Ins_Flag=3	INS activation step 3	Enable UBI
Ins_Flag=4	INS activation completed	Enable UBI

Table 13.4 Physical significance of UBI_On value

UBI_On	Description	Triggering condition
0	/	
1	Harsh acceleration	An event which triggered with a time longer than BS_Acce_Time, and a constant vertical acceleration speed higher than BS_Acce_Data
2	Harsh brake	accelerated speed of y-axis is less than BS_Dece_Data
3	Harsh lane switching	The absolute value of the accelerated speed of x-axis is greater than BS_Lane_Data and the orientation changes of the satellite positioning is less than BS_Lane_Angle
4	Sharp turn	The absolute value of the accelerated speed of X-axis is greater than BS_Turn_Data and the orientation changes of the satellite positioning exceeds

		BS_Turn_Angle
5	Collision	The absolute value of the vehicle's acceleration is greater than BS_Coll_Delta and the vehicle's attitude angle change does not exceed BS_Coll_Angle
6	Vehicle stability	An event which triggered within a time longer than BS_Stab_Time, and a constant change of the navigation angle with the angle speed absolute value higher than BS_Stab_Rate.
7	Rollover	The pitch or roll angle changes by more than BS_Roll_Angle
8	Abnormal attitude	The maximum variable of pitch angle and roll angle is greater than SAtt_Min_Delta and less than SAtt_Max_Delta

Table 13.5 Physical significance of terminal UBI alert parameters

Type	Data	Factory Default	Range	Unit
BS_Acce_Delta	accelerated speed threshold of harsh acceleration	16	8->50	0.1m/s ²
BS_Acce_Time	time threshold of harsh acceleration	3	2->8	s
BS_Dece_Delta	accelerated speed threshold of harsh brake	-45	-60->-30	0.1m/s ²
BS_Turn_Delta	accelerated speed threshold of sharp turn	40	20->60	0.1m/s ²
BS_Turn_Angle	Angle threshold of sharp turn	40	30->80	Degree
BS_Lane_Delta	accelerated speed threshold of harsh lane switching	20	10->60	0.1m/s ²
BS_Lane_Angle	angle threshold of harsh lane switching	20	10->30	Degree
BS_Coll_Delta	accelerated speed threshold of collision	15	10->30	m/s ²
BS_Coll_Angle	attitude angle threshold of collision	20	10->30	Degree
BS_Roll_Angle	attitude angle threshold of rollover	50	30->90	Degree
BS_Stab_Time	time threshold of vehicle stability alert	3	2->10	s
BS_Stab_Rate	angular velocity threshold of vehicle stability alert	20	10->30	Degree/s

SAtt_Min_Deta	Minimum corner threshold of abnormal attitude	30	10->40	Degree
SAtt_Max_Deta	Maximum corner threshold of abnormal attitude	50	40->80	Degree

14. Large File Transfer (apply to HVT001)

- Used to transfer large files, such as voice files
- Terminal send data to server by adopting the 8D protocol; server send data to terminal by adopting the 90 protocol. Both protocols' format are the same.
- Terminal space is limited, therefore, free space needs to be checked before data sent to terminal by server.

14.1 Terminal transfers the file to the server (8D)

Terminal send to the server

		Length (Byte)	Explain
Start Bit	2	0x79 0x79	
Packet length	2	Length= protocol number +information content+ serial number +error check	
Protocol Number	1	0x8D	
Info Content	File Type	1	0x00 voice file(monitored) 0x01 voice file(SOS) 0x02 intercom voice file
	File Length	4	Length of transferred file
	File Error Check Type	1	when error check type is “00”, use CRC check to transfer file when error check type is “01”, use MD5 check to transfer file
	File Error Check	N	when error check type is “00”, use CRC check to transfer file. The length is 2 bytes. when error check type is “01”, use MD5 check to transfer file. The length is 16 bytes.
	Start Bit	4	start position bytes number of split-transmitting
	Current Content Length	2	Data length behind start position of split-transmitting
	Content	M	Data packet after split

	Flag Bit	N	<p>File type is the type of transferred file</p> <p>when file type is 00 voice file (monitoring), the position length is 6 bytes. Start date and coding method of monitoring is the same as location packet.</p> <p>when file type is 01 voice file (SOS), the position length is 2 bytes. Bytes are the same with the corresponding SOS alarm packet serial number.</p> <p>when file type is 02 voice file (income), the position length is 6 bytes. Start date and coding method of monitoring is the same as location packet.</p>
Information Serial Number		2	<p>The serial number of the first GPRS data (including status packet and data packet such as GPS, LBS package) sent after booting is ‘1’, and the serial number of data sent later at each time will be automatically added ‘1’.</p>
Error Check		2	<p>The check codes of data in the structure of the protocol, from the Packet Length to the Information Serial Number (including “Packet Length” and “Information Serial Number”), are values of CRC-ITU.</p> <p>CRC error occur when the received information is calculated, the receiver will ignore and discard the data packet.</p>
Stop Bit		2	Fixed value: 0x0D 0x0A

iii. Appendix

1. code fragment of the CRC-ITU lookup table algorithm implemented based on C language
